

Growing Schedule: Coco

- Start building a nutrient buffer from the start, gradually increasing the base nutrients **Gold Label Coco A & B**.
- Add **Gold Label Roots** up to the 3rd week of flowering while the plant is still developing growth.
- Do not overdose your nutrient solution with **Ultra PK** and **Ultra MG**. They are highly concentrated and this will create an imbalance in your NPK levels.
- Add **Enzymes** once a week starting week 3 of flowering or at least once in week 3 of flowering and once before flushing. Add 0.5ml/litre once or 0.1ml/litre continuously.
