

# Feed Chart for **Hydro MAX**

for use in hydroponics systems

This feed chart is just a guide, it is possible to deviate!

NUTRIENTS ml/L	VEGETATIVE/ GROW PHASE				FLOWERING/ BLOOM PHASE									
	18 Hours Light				12 Hours Light									
	WEEK 1	WEEK 2	WEEK 3	WEEK 4	WEEK 1	WEEK 2	WEEK 3	WEEK 4	WEEK 5	WEEK 6	WEEK 7	WEEK 8		
<b>Hydro MAX Grow A</b>	1-2 ml	1-2 ml	3-4 ml	3-4 ml							Finale 3-4 ml	WATER		
<b>Hydro MAX Grow B</b>	1-2 ml	1-2 ml	3-4 ml	3-4 ml										
<b>Hydro MAX Bloom A</b>					3-4 ml	3-4 ml	3-4 ml	3-4 ml	3-4 ml	3-4 ml				
<b>Hydro MAX Bloom B</b>					3-4 ml	3-4 ml	3-4 ml	3-4 ml	3-4 ml	3-4 ml				
<b>Root Stim</b>	1 ml	1 ml	1 ml	1 ml	0.5 ml	0.5 ml	0.5 ml	0.5 ml	0.5 ml	0.5 ml				
<b>Buddy</b>					0.5 ml	1 ml	1 ml	1 ml	1 ml	1 ml				
<b>Turbo</b>			1 ml	1 ml	1 ml	1 ml	1 ml	1 ml	1 ml	1 ml				
	EC 0.9 - 1.4	EC 0.9 - 1.4	EC 1.8 - 2.3	EC 1.8 - 2.3	EC 1.9 - 2.5	EC 2.0 - 2.6	EC 2.0 - 2.6	EC 2.0 - 2.6	EC 2.0 - 2.6	EC 2.0 - 2.6			EC 2.0 - 2.6	EC 1.5 - 2.0

This chart includes a starting background tap water EC reading of 0.4. EC levels are a guideline only!  
pH 5.8 - 6.5 Temperature: Min 24°C - Max 28°C Humidity: Min 40% - Max 60%

### TOP TIPS :

- Always use equal measurements of both A & B
- Check your tap water EC to ensure the relevant HW/SW nutrients are used
- When using the Soft Water variants of these nutrients your EC will be 0.1 higher for every week than the readings shown

- If required, adjust the pH. Recommended pH range when using the Vitalink products is 5.8 - 6.5. You can find everything you need to measure and adjust pH in our Vitalink ESSENTIALS range.
- The optimal temperature range of the nutrient solution is 20°C - 24°C.
- Use nutrient solution immediately after mixing or keep solution circulating to prevent settling.

- During prolonged vegetative growth, when growing mother plants or when deficiency is observed use 1ml/L of Vitalink CalMag alongside main nutrients and other additives.
- To prevent your plants suffering from cold, heat or drought stress or to alleviate the impact these conditions may have on your plants, use Vitalink Heat, Vitalink Chill or Vitalink Hydrate.

- This growing schedule is recommended for the vast majority of plants grown in favourable environmental conditions. Please keep in mind that any growing schedule is always dependent on plant species and variety, temperature, humidity, type of substrate and system you are growing in. Always pay close attention to your plants to find out what their requirements are as they may vary depending on your specific plant and conditions.

- Protects plants against heat stress
- Helps plants to survive and prosper in hot conditions up to 40 degrees
- Can be used preventively or to help rescue your plants when sharp temperature rises occur
- Stimulates the growth and development of side shoots and roots

# VITALINK®

*The vital link between science and growing!*

- Calcium and magnesium supplement with added iron
- Essential for plants during prolonged vegetative growth or when deficiency is observed
- Calcium is important for strong cell walls and root development
- Contains two forms of chelated iron to maximise the availability of this micronutrient to your plants
- Magnesium is vital for plant growth and health

## Feed Chart for **Hydro MAX**

This is a straightforward grow schedule designed for beginner growers, not all our products are included in the chart. More information on the rest of the range and their dosage rates can be found on our website.

Struggling to work out how much VitaLink nutrient to mix up? Why not use our Nutrient Calculator  
[www.vitalink.eu/nutrient-calculator/](http://www.vitalink.eu/nutrient-calculator/)

- Clay Pebbles are ideal for hydroponic systems, including flood and drain, multi pot and drip-ring systems, as well as support media for deep water culture.
- Offer strong structural integrity and enable good root aeration and development
- Totally inert = stable EC and pH
- Unique irregular shape and porosity which increases their surface area

- A highly-concentrated flowering stimulant rich in potassium and phosphorus
- Use for 1 week in peak flowering period
- Will give plants an extra push during their late flowering period
- Redirects energy to flowers and fruit development
- Do not use WITH VitaLink Buddy but swap VitaLink Buddy for VitaLink PK during the week of highest demand
